

Corporate Treasurer Programme

OBJECTIVES OF THE PROGRAMME

A plethora of international programmes dealing with Corporate Treasury Management exists. However, these programmes tend to have been developed in first-world economies and whilst the majority of treasury skills can be generically applied in every economy, these programmes are, by nature, focussed on matters related primarily to the particular economy where the participants are located for example in the UK, Europe, USA, and China, and focuses around the taxes, methods of payments, and market characteristics specific to those centres.

A South African qualification must be developed that will assist those people operating within the South African Corporate Treasury space. Such a qualification aims to enable an understanding of the role that the Treasury function plays within a corporate entity and in particular the skill sets required by individuals operating within a Treasury to provide effective and meaningful services to their organisations.

This programme will also provide insight into understanding the Treasury role in a corporate environment.

CORPORATE TREASURER PROGRAMME

LEARNING OUTCOMES

By the end of the programme, participants should be able to:

- Describe treasury management, the treasurer and the core topics and risks that form part of treasury management
- Assess the structure of the treasury department, treasury operations and controls and specifically the segregation of duties
- Explain cash and liquidity management, cash flow forecasting and the instruments used for managing liquidity shortages and surpluses
- Examine the use of debt versus equity within an organisation, the importance of the capital structure, as well as the specific debt instruments in the market
- Identify the main features of products and participants of debt capital markets, as well as the different types of markets, sources of funding and key structural elements of financial transactions
- Assess risk identification and identify the principle financial risks, the key tools with which risk is managed and hedged as part of treasury management
- Practically examine and assess key aspects of treasury management in case studies
